Abstract (en)
[origin: WO2004082506A1] The invention relates to a mixing capsule (11), for a two-component mixture, comprising a container piece (13) and an ejection nozzle (19) on the front face thereof. A piston (15) may be axially displaced in the container piece (13). A through opening (55) is provided in the front face of the piston (15), to which a first chamber (53) is connected. The cavity between the front face of the container piece (13) and the front face of the piston (15) defines a second chamber or a mixing chamber (35). In the unused state of the capsule (11), a bursting membrane (59) seals the through opening (55) between the first and the second chamber. The mixing capsule (11) and the ejection nozzle (19) are embodied in at least two pieces and connected to each other by means of detachable connector means.
