Abstract (en)
[origin: WO2004082961A1] The purpose of the present invention is to enhance stiffness and to reduce deformability of the clipping assembly for document files, especially of a base plate (1) thereof. When taking into account the requirements related to use of such products during regular loading and permitting deformability, the weight of such improved assembly may be essential lower than the weight of any other assembly according to prior art, and moreover, it may also be easily manufactured. To this aim, the assembly comprises an improved base plate (1), which is equipped with least one elevation (15', 15") arranged in the area below each intermediate portion (223', 223") between the central portion (222) and each belonging guiding portion (221', 221") of the clipping set (2), whilst the central portion (16) of the base plate (1) below the cantilever (14) is elevated above the other areas of the base plate (1) by means of a surrounding bow (160), which extends along at least a part of the circumference of the said portion. In addition to the said elevations (15', 15") as well as the elevated and at least partially with the bow (160) surrounded central portion (16), the said base plate (1) may be still further reinforced by means of at least one longitudinal reinforcing means (17, 18), and optionally also by at least one transversal reinforcing means (19', 19") arranged in the area of each belonging positioning means (10', 10").
