Abstract (en)
[origin: WO2005068309A1] The invention relates to a stackable plastic transport pallet. Said pallet comprises an upper face that forms an essentially level bearing surface (1) and several supporting feet (2) that are situated on the underside of the transport pallet and are hollow and open towards the upper face, in such a way that they can nest inside one another when stacked. In addition, the underside of the transport pallet is provided with reinforcement ribs (4, 8, 9, 12). Said pallet is produced from a plastic blend containing recycled plastic with the addition of organic fibres, in particular recycled PE or PP plastics with the addition of organic cellulose fibres or hemp fibres. This permits a high load-carrying capacity and a long service life to be achieved with a cost-effective use of material.
