Abstract (en)
[origin: WO2004085754A1] The invention relates to a cover arrangement for a surface de-watering device or similar which can be installed in the ground in a hollow body which can be opened. Said device comprises a rectangular frame for installing into the ground, a cover which can be inserted into the frame, hinge devices which enable the cover to be maintained in the frame in a manner which pivots in an upwards direction in the direction of opening and lock devices which can lock the cover into the frame, thereby preventing opening. Said hinge and/or lock devices are embodied as flexible cast bars and are connected to the covers in a single-piece.
