Abstract (en)

[origin: WO2004085880A1] The invention especially relates to a planetary gearbox which conventionally comprises a sun wheel (1), an internal-gear wheel (2), and at least one planet wheel (9). According to the invention, the planet wheel (9) is rotatably mounted on a bearing axis (10) provided with a force transmission axis (12) which is eccentrically arranged in relation to the central axis (8) of the planet wheel (9) and is used for introducing or deriving force. The invention also relates to the same arrangement for a gearbox device, comprising two parallel linear faces (61, 62) instead of the sun wheel and the internal-gear wheel (1, 2).
