Abstract (en)
Method for manufacturing wooden parts, such as boards, particularly floorboards, having a worn look, wherein wooden parts of so-called fresh wood are planed at at least one of the main sides and subsequently are subjected to a drying process. Subsequently at least the planed main side can be subjected to a mechanical treatment for artificially ageing it. Method for artificially ageing wooden parts, such as boards, particularly floorboards, comprising placing the wooden parts of dried wood in a container filled with a bed of elements provided with smooth convexly curved surfaces, after which the container is brought into repetitive motion and the wooden parts are brought into intensive contact with the bed.
