Abstract (en)

A locking device for tools of the type with two pivoted handles, such as pincers, pliers and the like, comprising at least one element (5) that is detachably associated with the handles (3, 4) of the tool (2) and forms at least one first pair of openings (6a, 6b) for selective insertion of the handles (3, 4), which are substantially proximate to each other so as to keep the handles (3, 4) stably in a closed configuration of the tool (2), and at least one second pair of openings (7a, 7b) for selective insertion of the handles (3, 4), which are substantially mutually spaced so as to keep the handles (3, 4) stably in an open configuration of the tool (2). <IMAGE>
