Abstract (en)

[origin: EP1607267A1] The lever has two concentric control rings rotating with respect to a common support plate (300). A spring (400) stresses indexing rings (150, 250) in direction of corresponding control rings, where the indexing rings are associated to respective control rings. Each indexing ring has an engaging tooth permitting to maintain the indexing ring on the plate, where the teeth are positioned in respective housings. An independent claim is also included for an electrical switch for motor vehicle has a control lever.
