Abstract (en)

[origin: EP1607569A1] A method for fitting a sun shade to the inside of a window frame without any modifications to the frame has a variable length support (9) for the shade, e.g. sun blind, and with the two outer ends fitted with tilt mounted grips (6) which press into the inside faces of the window frame. The grips tilt about only one axis, with extension tags (16) sliding into a slot (17) while the top ends of the tags are lipped (7) to grip into the elastic seal of the window pane. The grips are backed by elastic elements which compensate for thermal movements and are mounted on the ends of the support via ball and socket joints.
