Abstract (en)
A gaming machine 10 has a display 14 and a game controller arranged to control images of symbols displayed on the display 14. The game controller is arranged to play a game 16 in which at least one random event is caused to be displayed on the display 14. If a predefined winning event occurs, the machine 10 awards a prize. When a trigger condition occurs in a base game of the game 16, a bonus feature is awarded. The bonus feature comprises a series of feature games. In order for a player to play each feature game, the player must make a wager on that feature game. Any wins arising during the playing of each feature game are multiplied by a multiplier greater than one. <IMAGE>
