Abstract (en)

[origin: WO2004087154A1] The present invention relates to the use of bioenhancers to decrease the resistance of microbial strains to anti-infective such as antibiotics and antifungals by potentiating the activities of anti-infective. This may be useful to reduce resistance in bacteria and yeast to aid in the treatment of certain infections and diseases and to lower the concentration of anti-infectives necessary to inhibit the growth of microbial strains.
