Abstract (en)
[origin: EP1462195A1] Preparation of hollow grinding bodies for material to be ground (MG) including a casting mold with a hollow space, arrangement of the casting core in the hollow space to give an intermediate space for the MG, introduction of casting core holding elements, application of an envelope to each of these, casting of the MG in the hollow space, where the envelopes consist of a metallic material which can be melted with the MG. An independent claim is included for a grinding body such that an intermediate layer is formed between the envelopes and holding elements (6).
