Abstract (en)
[origin: WO2004087516A1] The invention relates to plastic double corks (1, 2) containing an additive (4) which emits oxygen. Uncorking the bottle releases the additive (4) into the contents of the bottle and enriches the same with oxygen. In this way, the wine is aerated directly before consumption, obtaining the best possible gustatory quality. The double cork (1, 2) prevents any potential residue falling from the bottle into the glass when the wine is poured.
