Abstract (en)

[origin: WO2004085285A1] Method for heating food products in a hot-air oven, in particular the hot-air oven in the gallery of a passenger aircraft. In the method, use is made of stackable containers (1) made from heat-resistant cardboard for heating one or more food products accommodated in the container, in particular packaged food products, such as bread rolls which are served to aircraft passengers, in the hot-air oven. The container has a base (2) for supporting the food products, as well as side walls (3, 4) and an open top side. The container can be stacked directly on one or more identical containers. The base and side walls of the container are provided with one or more cutouts (5, 6), in such a manner that hot air can flow through each of the containers in a stack of containers for the purpose of heating the food products.
