Abstract (en)
[origin: WO2004087549A1] The invention relates to an arrangement (1) for an installation (2) for splicing web-shaped products (3) involving switching the product web (3A,3B) that is so arranged as to be fed into a splicing installation (2) of the kind in question from separate web magazines (5). In accordance with the invention, a splicing unit (6), which is supported by a swivel arm (7), is so arranged as to be swivelled between two or more in-feed positions (A,B...), to which the web of material is guided from an associated web magazine (5). The plane of the material web (3) through the splicing unit (6) lies essentially perpendicular to the axis of rotation (14) of the swivel arm (7).
