Abstract (en)
[origin: WO2004083737A1] The invention relates to a hot water reservoir (S) with a generally rectangular housing, the back wall (4) of which can serve as an assembly back wall for a particular mounting position of the hot water reservoir and which has at least two housing components with a separating joint (6) in a separation plane between the two, whereby the separation joint (6, 6') is horizontal in the assembled position. Both housing components are a one-piece, rectangular box (K), open at one end with a rectangular lid covering the box opening with a height amounting to only a fraction of the height of the box.
