Abstract (en)

[origin: WO2004086206A2] The invention relates to a device for searching and processing data in a mass storage device comprising a housing (10) provided with an acoustic and/or optical and/or mechanical output unit and a search function. A key unit is formed on the housing (10) for the input of Morse signals or Morse-type signals in two input modes. The first input mode is provided for the input of text and the second input mode is provided for the input of control commands.
