Abstract (en)

[origin: EP1609381A1] The sole has a band (4) with an end that is fixed by a seam on a lower side (2) of the sole, to cover a significant part of the circumference of the sole. The end of the band delimits a zone of the sole between its circumference and the seam. The end has width greater than that of the zone so that it is folded to cover the zone while covering a base part of an upper (10) of a boot sock. Independent claims are also included for the following: (A) a method for manufacturing a boot sock of a sports shoe (B) a boot sock for sports shoe having a sole.
