Abstract (en)

A support arrangement for use in the construction of a low level beam or a wall for a building or other superstructure, the support comprising: a support angle having: a base member for, in use, supporting one or more building blocks; a support member arranged at substantially 90 DEG with respect to the base member; and a plurality of support gussets extending from one side of the support member, through the support member and engaging on the other side of the support member with the base member to support the base member and to reduce relative movement between the support member and the base member. <IMAGE>
