Abstract (en)  
[origin: WO2004086899A1] The invention relates to a cleaning device (1) for a shaver (8), comprising a reservoir (2) for storing a cleaning liquid (3) and comprising a cleaning receptacle (5) for receiving the shaver (8). The reservoir (2) has a discharge opening (6) via which the cleaning liquid (3) can flow from the reservoir (2) to the cleaning receptacle (5). The inventive cleaning device (1) is characterized in such a manner that the reservoir (2) and the cleaning receptacle (5) are designed so that the level of the cleaning liquid (3) in the reservoir (2) is higher than a predetermined minimum level of the cleaning liquid (3) in the cleaning receptacle (5), and a flow of liquid from the reservoir (2) to the cleaning receptacle (5), said flow being generated by the difference between levels, can be controlled according to the actual liquid level inside the cleaning receptacle (5).
