Abstract (en)

[origin: FR2848981A1] The anchor has two tubular hollow arms at the end of which, a sleeve (2) supports and moves around the crew centers/ blades. A locking system is constituted by a tie rod (3), a bolt (9) and a compression spring (11) for blocking, releasing, and reversing a rod, where system is present in the interior of the anchor. The bolt is maintained in the position of blocking by the spring in a groove (13) on the blades.
