Abstract (en)

A device for applying and adjusting in height a decorative panel (P) applied to a structure (A) to be lined, such as the door of a built-in dishwasher, includes a bracket (B) secured on the rear of the panel (P) and provided with a peg (C) that engages a corresponding member arranged on the dishwasher door, said peg (C) resting on an eccentric portion (E) of a horizontal shaft (S) received in a seat (K). In order to adjust the height of the panel (P) it is sufficient to rotate the shaft (S) so as to move the eccentric portion (E) upward or downward and therefore also the peg (C) resting thereon, whereby the position in height of the panel (P) is adjusted with extreme precision and great rapidity without removing it from the door and without having to loosen and re-tighten the screws of the bracket (B).
