Abstract (en)

[origin: EP1611961A2] The band coating device for the applying of a coating medium onto a moving metal band has coating roller supported on a carriage, and an adjusting device allocated to the carriage. The adjusting device is constructed as a compact modular unit (52) which is equipped with drive units (53) applying the adjusting force and with measuring devices (54) monitoring it. All the hydraulic control lines on the drive units are located inside the compact modular unit. An independent claim is included for a method for the applying of a coating medium with a predetermined thickness onto a moving metal band in a band coating device.
