Abstract (en)

[origin: EP1612326A1] The pressure sorting assembly, for processing fiber suspensions, has a sieve basket (1) to retain impurities from the suspension (S) at the inflow (4). A sieve cleaner (7) is at a rotor body (8), to prevent sieve blockages. The rotor body has a projection (11), extending into the inflow, especially to keep impurities clear of the sealing unit (18).
