Abstract (en)
A self supporting flexible linear lamp formed by modular components of one type (1) made of a hard plastic material such as polycarbonate, that rotatably fit and then interlock with each other, enabling the lamp to assume infinite stable configurations and conferring its characteristic flexibility. The lamp can assume configurations also in upright positions without the aid of fixings. The components are made of a translucent plastic to let the internal light, from an LED flexible tube or similar, to go through.
