Abstract (en)

[origin: WO0239791A1] The invention concerns an atmospheric plasma method for treating an object to be treated made of an electricity conducting material, comprising generating plasma jets with plasma generators on a surface to be treated of the treated object, and the relative displacement of the treated object relative to the plasma generators. At least one of the plasma jets is a cathodic jet and at least one of the plasma jets is an anodic jet, the anodic jet being applied in a treating zone on the surface to be treated proximate to the cathodic jet.
