Abstract (en)
[origin: WO2004089170A1] The present invention relates to a flower holder structure (1), particularly suitable for supporting and exhibiting flowers (F) and similar ornaments, being they long-stemmed or long-stalked, dry of freshly-cut, comprising a first base plate (2), a plurality of stiff elongate connecting elements (3), which are removably associated, at one end (3a) thereof with said first base plate, all of them projecting on the same side with respect to said base plate (2), and which are removably associated, at their other end (3b), with a second plate (4), in order to form a substantially basket-like holder, said second plate (4) having at least one hole (4a) passing therethrough, forming the mouth of said substantially basket-like holder.
