Abstract (en)
[origin: DE10317036B3] The headrest support for an automobile seat is held by at least one carrier rod (13) at the backrest. The headrest has a hollow interior defined by housing walls (16,18) to carry the upholstery. The leading wall side of the upholstery carrier (P) is towards the head of the passenger has two swing wings (F) on a swing axis (20) with film hinges (19) at the center (M). The headrest support for an automobile seat is held by at least one carrier rod (13) at the backrest. The headrest has a hollow interior defined by housing walls (16,18) to carry the upholstery. The leading wall side of the upholstery carrier (P) is towards the head of the passenger has two swing wings (F) on a swing axis (20) with film hinges (19) at the center (M) which can be locked in position by friction bodies, as a carrier structure for the upholstery and which define the hollow interior (25) directly at the leading housing wall (18).
