Abstract (en)  
[origin: US2006086828A1] A sprayer push-button with a lateral spraying outlet. The push-button is made up of two parts which fit into each other and define between them a whirl chamber, a part of which is formed by a cavity ( 38 ) defined inside the outer part on a face of the latter that is tilted in a direction and at a sufficient angle ( $\infty$ ), suitable for making it possible to remove the outer part from the mould "along the axis" without damaging the cavity.
