Abstract (en)
[origin: WO2004065741A1] The invention concerns a safety assembly useable in public locations. Said assembly comprises a container (1) which is a hollow box whereof the walls (4, 5, 6, 7, 8) define an internal space for receiving personal objects, said box being provided with an opening (9) capable of being closed with a plate including a lock capable of being actuated by a mechanical or electronic key, and with an orifice on one of its walls, the fixing means consisting of a block (20) integral with the non-detachable element (3), said block (20) comprising a slot (21) and penetrating said orifice and being assembled in that position by means of a tab (24) co-operating with said slot (21), the tab (24) being insertible into or removable from said the slot (21) only from inside the box and hence when the box is opened by deactivating the closure means. The invention can be used as a safe for example in leisure locations.
