Abstract (en)

The invention relates to a goal or target apparatus including a frame which defines a plurality of target areas spaced around the apparatus and may also, in one embodiment include a centrally mounted target with an opening at a different orientation to the other target openings which typically depend down towards a supporting base. In a preferred embodiment a lip portion is provided at the bottom of said goal target openings which depend downwardly and the lip acts as a barrier for the ball from leaving the goal target once it has entered.
