Abstract (en)
[origin: EP1614840A2] The device has a lock that releases a lock part in the open position and traps it in the closed position, a motor-driven closure aid and at least one sensor that switches the motor on and/or off in a defined position of the flap (10) or door. The aid is independent of the lock and is a device of two parts (12,50), one mounted on the door or flap and the other on the body (11) of the vehicle.
