Abstract (en)
[origin: EP1615250A1] The device has a control unit (2) displaced between working positions and a rest position, where a longitudinal axis of the unit is coaxial with a rotation axis of a fixed indexing unit (3) and active sides of fixed and movable indexing units (3, 4) are parallel. The longitudinal axis is spaced angularly from the axis of the unit (3) and the active sides do not magnetically contact with each other in the working positions.
