Abstract (en)

[origin: US2006097012A1] The invention concerns a fluid substance sample dispenser comprising a cylinder defining a chamber for receiving said substance and closed by a plunger adapted to slide inside said cylinder and by a cap, rotatably mobile between an open position and a closed position; said dispenser comprising locking means; said cap comprising a skirt adapted to be pressed against the wall of said cylinder, said skirt having a first radial slot designated to co-operate with a second radial slot provided in said cylinder in the open position such that said chamber projects outwards, and said locking means including a tubular member maintaining said cap in said closed position and locking it in translation, said tubular member having a cleavable portion.
