Abstract (en)

[origin: WO2004085254A2] The invention relates to a method and installation for heating and packing a product in packaging and to the packaging used for same. According to the invention, a consumable product (14), in particular a food product, is introduced into a packaging container (10) and heated therein. Once the product has been introduced into the packaging, the packaging is partially closed, such that at least one zone remains temporarily unwelded (17) between two walls of the packaging (10A, 10B). The product is subsequently heated in the partially-closed packaging and said packaging is then closed completely by welding the walls in the aforementioned zone (17).
