Abstract (en)

[origin: WO2004094256A1] The present invention relates to a dispensing apparatus at a container (1) for a liquid or several liquids or at a conduit. The front wall (2) of the container or the like has a dispensing tube (3), which is provided with a seat-forming holding element (10) for a valve body (20). According to the invention the valve body is mounted concentrically in the tube opening (8), has a rod-like shape (21) and is with an outer end (22) guided by said holding element (10) and with an inner end (26) of a cup spring (28), which surrounds it and which at least in its rest or closing position is designed as a cone, which is open towards the first-mentioned end and which is supported by and is prestressed against the inner side of said front wall (2) or a corresponding wall in said dispensing tube or the like (3).
