Abstract (en)
[origin: WO2004094753A1] The invention relates to a water suction device comprising a sealed reservoir (1) which is provided with an inlet (6) and an outlet (19) and is connected to a suction mechanism (9) and a pump (21). A valve device (16) is associated with the suction mechanism (9), and a level monitoring device (24, 30, 31) is associated with the pump (21), said valve device and level monitoring device causing the pump (21) to suck the water through the inlet (6) and to deliver the water through the outlet (19) when a determined level is reached.
