Abstract (en)
[origin: FR2854215A1] The bearing has a rolling unit, including rollers (26) in contact with rotating and fixed rolling paths, housed in a case . Internal and external annular joints (22, 24) are inserted between rotating and fixed coaxial parts (18, 20) to retain a lubricating content in the case. The joints are placed in a semi-geometric space defined by a plane. The fixed path extends to an exterior of the space or coincides with the plane.
