Abstract (en)

The invention relates to a device for radiation treatment of proliferative tissue surrounding a cavity in an animal body comprising radiation delivering means for placing at least one energy emitting source at a desired position within said cavity for performing said radiation treatment. The invention also relates to an implant element to be implanted into a cavity in an animal body for radiation treatment of proliferative tissue surrounding said cavity. The invention aims to provide a device and method for radiation treatment of proliferative tissue surrounding a cavity in an animal body, wherein the radiation treatment is performed in a far more accurate and reproducible manner and wherein the device causes far less discomfort to the patient. According to the invention said device comprises an permanent implant element suitable for placement in said body cavity, said element being made from a non-deformable material and having an outer surface being conformal to the inner surface of said body cavity.
