Abstract (en)

The board has a complementary unit fixed to a base (2) in a skate zone and comprising two longitudinal lateral parts (4a, 4b) extending parallel to each other. The lateral parts are fixed in respective lateral clearances of the base and are connected by a transversal connection part (4c). Each of the lateral clearances is laterally opened outwards and towards top, and is not opened towards bottom. An independent claim is also included for a method of fabricating a complementary unit.
