Abstract (en)

A contents-filling vessel reversing apparatus for reversing a vessel (Y) accommodating the contents to be filled into a packaging container from a upright state to a nearly inverted state, thereby dropping downward and filling the contents into a container disposed underneath. A vessel is held at one end of a vessel holding member (9,10) that is rotated around an axis (12). The axis (O) is situated at a position higher than the center in the vertical direction of the vessel supplied to the gripping stop position where the vessel is gripped in a upright state by the holding member.
