Abstract (en)
The valve for the bleeding of a radiator which can be opened or closed by the exertion of pressure on a press button (2) has a fixed part (11) and a movable part (4). A compression spring (8) is fitted in the valve housing (1), and the press button with the ventilation passage (3) in the closed valve position (5) disappears partially or completely in the valve housing, and in the open state protrudes from it. The fixed part of the pressure mechanism is prevented from being withdrawn by a locking ring.
