Abstract (en)

The device has levers (14, 15, 16), mounted in a rotary carriage (2) of a tourbillon, in contact with the periphery of a balance (3), for blocking it when action is exerted on one of the levers by a shoe (17). The shoe disposed outside the carriage is controlled by a time-setting stem (26). Outer edges (18, 19, 20) of the levers are placed above pillars (4), so that the shoe acts on the levers without interfering with the pillars.
