Abstract (en)

A system for providing electronic access to tracking information regarding articles processed for mail delivery and related electronic information, might include a mail processing system, data storage and a computer system. The mail processing system processes the articles for mail delivery, and it provides tracking data regarding its processing of each article. Examples of the mail processing system include a printer, an inserter system, a sorter system and a mail delivery system. The data storage stores the tracking data and electronic files containing electronic information corresponding to respective articles processed for mail delivery. The data storage also maintains linkages between the article tracking data and stored files containing the corresponding electronic information. The computer system provides a user with integrated on-line access to the tracking data for the articles and the files containing the corresponding electronic information, based on the linkages.
