Abstract (en)

[origin: EP1617567A2] A method for determining a power level for communication in a wireless network is provided. The method includes generating a probe message comprising a power level indicator. The power level indicator corresponds to a particular power level of transmission for the probe message. The probe message is operable to request a base station to provide system access for a mobile station. The probe message is sent to the base station at the particular power level.
