Abstract (en)  
[origin: WO2004052150A1] Modular cupboard structure comprising a plastic sheet cut in four sections each bearing grooves (11, 13, 15, 17, 19), which follow a predetermined layout, along the length of both its surfaces. Bars (25, 27, 29, 35), of a corresponding shape and cross section with the grooves, are inserted in the grooves. The four sections connectable to each other at an angle of 90° by gusset plates (23) inserted in the grooves (17, 19) of each section form a cupboard. Bars are used to bear the functioning mechanisms and to join the cupboards together. Outer coatings and a work surface can be affixed to the structure without the use of screws.
