Abstract (en)
[origin: WO2004098365A2] There is provided a hand-utility interface for use in protecting a user's and during utility tasks. The interface comprises a foamed block body having a plurality of finger-receiving channels defined therein; and palm support means for securing said interface to the palm of a user's hand. The finger-receiving channels snugly receive the fingers of said user's hand such that in use, the palm support means and finger-receiving channels secure the interface to the user's hand. The interface may be used with various utility attachments including those in the form of wipes. A cleaning cloth is also provided.
