Abstract (en)

[origin: FR2853921A1] Hanger (10) has two U-shaped parts (11, 21), with top part having flared protrusion (16) on each branch (12, 13), and bottom part having slot (24) on each branch (22, 23). U-shaped parts are connected to each other by inserting protrusions into slots so that U-shaped parts can be rotated around axis joining two flared protrusions. Self-drilling screw (34) is used to secure both U-shaped parts together. An independent claim is also included for a manufacturing process of a carrier structure, such as suspended ceiling.
