Abstract (en)

[origin: WO2004092512A1] Facility for storing objects in the revolving multiple-level circular rings consists of bearing structure and circular, horizontally-rotary revolving, multiple-level circular rings with storage space and the service opening in which there is a vertically moving jacking equipment. On the bearing structure are placed pairs of rails (18) for each rotatory circular ring (2, 3, 4), where the inner rail is in the place of the self-service openings (8, 9, 10) disconnected and its part (18) is fastened on the framing of the equipment for vertical motion (5, 6, 7). Facilities (11, 12, 13) for a revolving motion of the particular circular rings (2, 3, 4) are separate and mutually independent in every level.
