Abstract (en)
[origin: WO2004097544A1] An arrangement for changing the direction of travel of a vehicle in two opposite directions has a first accelerator pedal (2) for driving in a first direction and a second accelerator pedal (3) for driving in a second direction. According to the invention, the arrangement includes a blocking member (17) being arranged for blocking accelerator pedals in their neutral positions when a pressure is applied onto them simultaneously and, furthermore, being arranged for blocking the first accelerator pedal in its neutral position when a pressure is applied onto the second accelerator pedal in order to drive the vehicle in the second direction, and for blocking the second accelerator pedal in its neutral position when a pressure is applied onto the first accelerator pedal in order to drive the vehicle in the first direction.
